## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-27 and 29-34 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-27 and 29-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Van de Walle et al. (US5383211) in view of Jewell et al. (US6359920).

With respect to claims 1, 3-7, 9-12, 15-19, 21-25, 27, 29, 31, and 33, Van de Walle show an active region comprising one InGaAsSbN quantum well (col.6, 1.24-25) comprising more than 1% N (col.4, 1.42-50), AlGaAs barrier layers (col.4, 1.67), and AlGaAs confinement layers (col.5, 1.6-7). Van de Walle lack the quantum well having a depth of at least 40 meV. Jewell disclose the quantum well of 0.484 eV which satisfies the limitation of at least 40 meV. For the benefit of

obtaining an optimum for a wavelength emitting semiconductor laser, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide Van de Walle what is taught by Jewell.

With respect to claims 2, 8, 14, 20, 26, and 30, Jewell disclose the GaAsP barrier layers (col.25, l.65-66).

With respect to claims 13, 32, and 34, Van de Walle disclose the quantum well (active layer) thickness is 10-500 Angstrom (col.7, l.27-28) which satisfies the claim limitation of 50 Angstrom.
